**Table 2: Features of clinical approaches for studying cerebral complications in preeclampsia\*.**

<b>MR-technique</b>	<b>Advantages</b>	<b>Disadvantages</b>
Magnetic resonance imaging	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Non-invasive</li> <li>-Not operator-dependent</li> <li>-Evaluated in eclampsia</li> </ul> <p><b>Magnetic resonance imaging</b></p> <ul style="list-style-type: none"> <li>-Whole-brain coverage</li> <li>-High soft tissue contrast</li> <li>-Vasogenic and cytotoxic edema</li> </ul>	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Requires stable patient to perform examination</li> <li>-Long acquisition time</li> <li>-Contraindicated for patients with claustrophobia</li> <li>-Might not be accessible in low-income settings</li> </ul>
Magnetic resonance spectroscopy	<ul style="list-style-type: none"> <li>-Flow</li> <li>-Perfusion</li> <li>-Cortical activation</li> <li>-Cortical networks</li> <li>-White matter integrity</li> <li>-Volumetric studies</li> </ul> <p><b>Magnetic resonance spectroscopy</b></p> <ul style="list-style-type: none"> <li>- Metabolic information</li> </ul>	<p><b>Magnetic resonance imaging</b></p> <ul style="list-style-type: none"> <li>-No metabolic information</li> </ul> <p><b>Magnetic resonance spectroscopy</b></p> <ul style="list-style-type: none"> <li>-Poor spatial resolution</li> </ul>
<b>Cerebral Doppler</b>		
Cerebral perfusion pressure	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Non-invasive</li> <li>-Bedside examination</li> </ul> <p><b>Cerebral perfusion pressure</b></p> <ul style="list-style-type: none"> <li>- Short acquisition time</li> <li>- Can be repeated before/after treatment</li> </ul>	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Operator-dependent</li> <li>-Learning curve to obtain transcranial window</li> <li>-Might not be accessible in low-income settings</li> <li>-Not evaluated in eclampsia</li> </ul>
Dynamic cerebral autoregulation	<p><b>Dynamic cerebral autoregulation</b></p> <ul style="list-style-type: none"> <li>- Evaluates the response of blood vessels response to continuous systemic blood pressure changes, doesn't rely on absolute blood pressure levels</li> </ul>	<p><b>Cerebral perfusion pressure</b></p> <ul style="list-style-type: none"> <li>-Diverging results between studies</li> </ul> <p><b>Dynamic cerebral autoregulation</b></p> <ul style="list-style-type: none"> <li>-Long acquisition time</li> <li>-Requires software for reading, not commercially available</li> </ul>
<b>Cerebral biomarkers</b>		
S100B	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Easily accessible</li> </ul>	<p><b>All models</b></p> <ul style="list-style-type: none"> <li>-Might not be accessible in low-</li> </ul>

Neuron Specific Enolase	-Not operator-dependent	income settings - Not evaluated in eclampsia -Not exclusive origin in the central nervous system
Neurofilament light chain	<b>S100B</b> -Astrocytic origin, located at the blood-brain barrier interface - Have been shown to reflect blood brain barrier injury	<b>S100B</b> - Also found in adipose tissue
tau	<b>Neuron Specific Enolase</b> - Reflects neuronal injury  <b>Neurofilament light chain and tau</b> - Reflects axonal injury - Promising biomarkers in degenerative disease	<b>Neuron Specific Enolase</b> - Found in red blood cells – sensitive for hemolysis - Not certain to reflect blood-brain barrier injury  <b>Neurofilament light chain and tau</b> - Not certain to reflect blood-brain barrier injury - Also found in adipose- and soft tissue
<b>Clinical signs and symptoms</b>		
	<b>All models</b> -Easily accessible -Accessible in low-resource settings	<b>All models</b> -Poor predictive values -Mostly studied retrospectively
Neurological symptoms	- Non-invasive  <b>Neurological symptoms</b>	<b>Neurological symptoms</b> - Operator dependent
Vital parameters	- Used in clinical practice  <b>Vital parameters</b> - Used in clinical practice - Not operator dependent	<b>Vital parameters</b> - Not evaluated for adverse cerebral outcomes
