

Guidance for Safeguarding Partners (England): Deaf Children, Young People and their Families.

Developed by the
Social Workers with Deaf Children and Professionals group

August 2022

What is the purpose of this guidance?

This guidance and accompanying tool are designed to support safeguarding partners and their partnership boards in England to consider the safeguarding needs of deaf¹ children, young people and their families in the services they provide.

Who is it for?

Given that the rights of disabled children and young people with special educational needs and disabilities (SEND) up to age 25 overlap with children and adult social care legislation, this guidance will be useful for:

- safeguarding partners and their associated adult safeguarding partnership boards
- commissioners of statutory and voluntary services to disabled children and young people up to age 25, and their families
- managers of commissioned services to disabled children and young people and their families up to age 25
- practitioners working with deaf children and young people and their families up to age 25.

It will also be relevant to commissioners, managers and practitioners who work with deaf parents, some of whom will be British Sign Language users.

The guidance may also be useful to inspectors within Ofsted, CQC and HM Inspectorate of Constabulary.

The accompanying tool includes:

- a summary table of key legal duties on individual safeguarding partners with relevance to deaf children, young people and their families
- key outcomes demonstrating deaf children and young people are being supported in the area of your responsibility
- suggested actions to meet the key outcomes

¹ We use the word 'deaf' to mean children, young people who have a permanent hearing loss; who may choose to communicate through speech, sign language or a combination of both and may be supported by the use of hearing aids/cochlear implants. All deaf children and young people are disabled within the Children Act 1989. Deaf children and deaf adults are recognised as disabled within the Equality Act 2010 and the United Nations Convention on the Rights of Persons with a Disability.

- links to examples of best practice guidance and documents of specific relevance to deaf children, young people and their families.

A self-audit tool is also included in order for partners to consider current provision, identify areas to develop, and track progression.

Acknowledgements

The members of the Social Workers with Deaf Children and Professionals group comprise of a range of different professionals drawn across different local authorities, social care, mental health, academia, and charitable organisations. The purpose of this group is to provide a regular forum for social workers with deaf children and professionals across England and Wales to have professional discussions in this specialist field and to share best practice and pathways.

The group have contributed immensely to the audit tool and other projects such as the NSPCC Safeguarding Deaf Children Conference. They also promote multi-agency working, seek to influence policy development within all member organisations and the wider audience in the needs of deaf children and young people, and proactively link research and practice using the group to share ideas and information.

The members of this group who have been involved as co-developers/authors of the audit tool are prepared to have their names and organisations listed at the front of the document for input in 2020/2021 and up till March 2022 as a collective group. All members are experienced and registered social workers with Social Work England.

- Shirley Wilson, Senior Consultant for d/Deaf and disabled children, NSPCC (chair of the group)
- Professor Alys Young, Professor of Social Work University of Manchester
- Jo Hornsby, Social Worker, Suffolk County Council
- Daniel Sharpe, Student Social Worker, West Sussex County Council (post June 2022 ASYE)
- Tim Richardson, Head of Operations, Deaf CAMHS, Leeds and York Partnership NHS Foundation Trust
- Nicola Rouse, Senior Practitioner, Kent County Council
- Carol-Ann Churm, Post Graduate Student
- Colm McGerigal, Social Worker for people who are Deaf, Royal Borough of Kensington and Chelsea
- Angela Goddard, Social Worker, Jersey

We would also like to acknowledge the contribution of Chris Mullen, former social care policy adviser for the National Deaf Children's Society and co-chair of the group for his contribution to the group and this resource.

Background

In 2010, the National Deaf Children's Society (NDCS) published an audit tool for the then Local Safeguarding Children's Boards (LSCBs) to consider the safeguarding needs of deaf children and their families. This guidance updates that initial tool considering subsequent:

- legislative changes transferring powers to the new safeguarding partners and the ability of them to form partnership boards with the new Adult Safeguarding Boards
- the new duties on safeguarding partners to support children and young people with SEND
- the introduction of local area SEND inspections by Ofsted/CQC.

It is informed by evidence derived from the first ever national safeguarding deaf children conference hosted by NSPCC² in 2016, new research concerning deaf children and their families, advances and innovations in social work practice in this field and related published specialist guidance.

Understanding deafness

In the UK, approximately one in 1,000 children are born with a permanent hearing loss and there are around 51,000 deaf children with a permanent hearing loss in the UK ([CRIDE, 2021](#)), half whom are born deaf, half of whom have acquired their deafness through childhood. Between 30-40% of deaf children have additional needs ([Hauser & Marschark, 2008](#)) with the prevalence of severe multiple disabilities being at least 20% ([van Dijk, Nelson, Postma, & van Dijk, 2010](#)).

Deafness is commonly considered as if solely a medical condition with attention focussed on the restoration of hearing through the provision of technology such as hearing aids and cochlear implants. This approach can lead to the false assumption that deaf children relying on technological support are not deaf anymore and can be treated as hearing children. A social model approach considers deaf children's needs from the perspective of their holistic psycho-social development and focusses attention on the ways in which this may be impeded. From this perspective, the difficulty is not that deaf children may not hear, but rather that features of their environment, whether in the family, school or wider society, may create barriers to their ability to thrive.

However, a cultural-linguistic approach to being deaf respects British Sign Language (BSL) as a language recognised in law and the community of its users as possessing a unique cultural identity. BSL was officially recognised as a language in its own right by the UK Government in 2003 and in Wales in 2004. In Scotland BSL has full legal status through the BSL Scotland Act 2015, where its use must be promoted. More recently, the BSL Act 2022 has been passed, legally recognising BSL as a language for England, Wales and Scotland and requiring government departments to report on how they are promoting and facilitating the use of BSL.

Deaf children are highly diverse whether in terms of their degree of deafness, language use (spoken, signed or both), cultural identity (whether in terms of being Deaf or their family heritage), use of technologies to hear and the ways in which the impact of deafness is filtered through responses of familial, educational and social environments. All deaf children have legal rights as 'disabled children', irrespective of their communication preferences for British Sign Language, or accessing spoken language through assistive hearing devices. Deaf children can be active participants in measures to safeguard and promote their welfare.

The impact of deafness

Deafness in itself is not a learning disability, and deaf children can achieve just as well as their hearing peers. However, without the right support in place to aid deaf children's age-appropriate language acquisition (whether through signed or spoken language or a combination of both), deafness can impact significantly on their cognitive, social and linguistic development, and psychological well-being. This may have lifelong detrimental consequences ([Glickman & Hall 2019](#)) with reduced opportunities to participate in society and achieve active citizenship ([Morris 2011](#)).

Without action to support deaf children's access to develop and use language, deaf children will be at greater risk of experiencing isolation within their families (over 90% of whom are hearing), their schools and their communities.

² The NSPCC conference at the University of Manchester was led with the participation of specialist practitioners working in children's social care.

The language and communication barriers faced by deaf children and young people manifest themselves in increased risk. From the limited research in the UK and internationally, deaf children, in comparison with the general population of children, are:

- struggling to access children's social care^{3 4}
- at greater risk of abuse⁵
- more likely experience mental health difficulties⁶
- will struggle to achieve key developmental milestones in the early years and are likely to underachieve at school⁷
- at greater risk of both unemployment and under employment when they reach adulthood.⁸

With reduced opportunities to access to language and communication, deaf children will struggle to develop the language needed to understand what abuse is, to be able to name it and be able to disclose this to someone who can understand their communication ([NSPCC, Taylor et al 2015](#)).

Why safeguarding partners must consider deaf children and their families, and Deaf parents

Over 90% of deaf children are born to hearing parents with little or no experience of deafness, what this will mean for their children, and how they should respond.

Therefore, access to some level of support is vital, particularly following identification and in the early years where parents play a critical role in developing their child's language and communication and setting the foundations for socio-emotional development. For this reason, deaf children are recognised as 'disabled children' within the [Children Act 1989 \(s17\(11\)\)](#) as having 'protected characteristics' along with deaf adults, as disabled people within the [Equality Act 2010](#) and its associated [Public Sector Equality Duty \(2011\)](#). [Working Together 2018](#) specifically makes this important link between equalities legislation and how services must carry out their duties with regard to disabled children, which includes deaf children. Deaf children as disabled children are also afforded key rights as disabled children with the United Nations Conventions of the [Rights of the Child](#), and [Rights of Persons with a Disability](#).

However, research by the [University of Manchester in 2008-10](#) and follow up research by [NDCS in 2014](#) found many deaf children and their families were not able to access social care services that they were legally entitled to as disabled children. Both studies showed that many social care services were reluctant to identify deaf children as 'children in need' and often assumed that their needs would be fully met by health and education services alone. Such an approach fails to recognise the risks and complexities that deafness can pose in terms of child development and family life. It also fails to acknowledge the cultural aspect of being deaf associated for some children and families with BSL and an affiliation with the Deaf community.

At the [2016 NSPCC Safeguarding Deaf Children conference](#), delegates from across the country also reported that:

- multi-agency pathways to identify and respond to deaf children's needs across the whole span of childhood, not just the early years, are very poorly developed

⁷ www.ndcs.org.uk/information-and-support/being-deaf-friendly/information-for-professionals/research-and-data/

⁸ www.equalityhumanrights.com/en/being-disabled-britain-supporting-data

- joint working protocols particularly with respect to responding to abuse and child protection are not well defined
- the specialist nature of knowledge required for an effective safeguarding response is under-estimated
- a clear definition and understanding of outcomes to be achieved for deaf children are poorly articulated.

Deaf parents

Many deaf parents successfully parent their deaf or hearing children without the need for any social care involvement. Deaf parents who use a signed language such as BSL offer their children unimpeded access to fluent language and communication which supports language acquisition, the achievement of age-appropriate milestones and socio-emotional development on a par with hearing children in hearing/spoken language homes. This conferred benefit is not always recognised by those more used to spoken language developmental norms.

However, many deaf parents have experienced lifelong challenges and barriers to accessing everyday information because of poorly developed literacy in the written word and the lack of access to information and communication in a signed language. This extends to their educational experiences which have not fully met their language and communication needs in their formative years. Consequently, some deaf parents lack 'expected' parenting skills and knowledge. The vast majority will have been parented by hearing people with few deaf parent role models available to them. Research by [Munro et al 2018](#) confirms previous studies which show that when disabled parents seek help from children's social care, their response is more one of surveillance and monitoring.

Therefore, in decisions to safeguard and promote the welfare of children, services must fully recognise the everyday barriers that deaf parents experience and have experienced in society and where possible provide support to them in their parenting role in a manner that is linguistically accessible and culturally appropriate for those who are signers.

The decline of deaf specialist social care knowledge and practice

Specialist social work and social care teams, sometimes referred to as sensory teams or deaf teams, were once common in local authorities and played a nationally recognised specialist role. They usually worked with children and adults across the lifespan attending to needs of those who were sign language users and those who were not. Staff had specialist knowledge of, for example, usual developmental trajectories for deaf children as well as specialist skills in, for example, how to communicate effectively in spoken and/or signed language with deaf children and deaf adults. However following changes brought about by the Children Act 2004, [research](#) has found that such teams have largely disappeared, an unintended consequence as councils separated their children and adult services leaving no room for an all-age specialist team. Many local authorities have, therefore, lost this vital expertise in recognising and responding to the safeguarding needs of deaf children and their families. The [2016 deaf child safeguarding conference](#) recognised the challenges faced by service providers given the low incidence of deafness among the children's population, but highlighted the critical importance of a strong multi-agency approach to safeguarding deaf children and the additional specialist knowledge and practice that may be required.

Safeguarding partners may wish to consider in their locality what the safeguarding pathway would be in the case of a deaf child or a child in a Deaf family and whether the arrangements are clear, appropriately resourced, and effective. In the few examples where specialist teams remain, it is also important to understand and appreciate their working practices. The tool accompanying the guidance will assist in this process.

SEND legislation and inspection duties

SEND legislation, extending support up to age 25, has led many local authorities to combine some of their once separated social care duties towards children and adults. These developments, along with ability for new safeguarding arrangements to cover more than one local authority, present an opportunity to create, share or develop specialist expertise/resources in safeguarding of deaf children and young people which could not be achieved in previous structures.

In addition, Ofsted and the Care Quality Commission's joint local area SEND inspections, although shorter and less in-depth than other inspections, are shining an important light on the multi-agency arrangements to safeguard and promote the welfare of children with SEND. Such inspections offer the opportunity to understand that, whilst there are specialist education support for deaf children and young people, there is often an absence of any formal arrangements to consider their potential social care needs.

Challenge to safeguarding partners

As strategic leaders in safeguarding their local population of children and young people, the new safeguarding partners have important legislative duties and responsibilities with regard to deaf children and young people as disabled children and determining whether their collective functions are able to safeguard them appropriately. For example, partners must produce a threshold document with clear procedures and process relating to the support of disabled children (1(16) Working Together 2018) including deaf children whose requirements may be particular because of the fundamental issues of language and communication that surround deafness.

The challenge for safeguarding partners is that, whilst they are increasing their awareness and response to the risks to children and young people through sexual exploitation, online abuse and county lines, and the wider context in which these occur, are they also able to explicitly consider how these threats pose additional risks to deaf children and young people and what planning processes are in place to respond to these?

The tool accompanying this guidance

The tool that follows will help safeguarding partners through their corresponding partnership arrangements to consider their legal duties to safeguard deaf children and young people and support their families. The summary table identifies key outcomes for deaf children and young people with reference via hyperlinks to relevant legislation, statutory guidance and to further examples for better practice. All links are correct at the time of publication.

It is complimented by a self-evaluation audit tool, which follows in Appendix 1, which can serve as a useful benchmarking tool for partners to consider their provision and track progression and complement other service-user led evaluations.

Key outcomes for deaf children – summary table

Although we signpost to examples of reports/documents for better practice, this does not mean we endorse everything cited in them. Additional examples of reports/documents may be added as practice continually develops.

The table that follows covers the following areas:

- 1) Safeguard and promote welfare in all functions
- 2) Provide information
- 3) Multi-agency working
- 4) Early help services
- 5) Actively seeking deaf young peoples' wishes and feelings
- 6) Social care assessments
- 7) Child Protection Investigations
- 8) Moving into adulthood
- 9) Mental health needs of deaf children and young people
- 10) Care- experienced deaf children and young people
- 11) Co-production

A self-audit tool follows in Appendix 1.

11) Co-production	s19 Children and Families Act 2014 / SEND Regs 2014	✓			Deaf children and young people: - report feeling fully involved in services which they use or may use. - report improvements in participation skills. - feel supported to speak up and expect to be involved in decisions about them. - are represented in forums, e.g. youth councils.	LAs, ICBS: - commissioning SEND services review their commissioning cycle with key partners to ensure it reflects principles of co-production. - involve deaf young people and their parent-carers in recruitment for specialist posts working with deaf children and young people with SEND. Police - involve deaf young people in co-producing public information initiatives	Sunderland Together for children Participation and Co-production strategy SCIE young people NHIR Co-production in research 2021 Dorset SEND and co-production policy INVOLVE org
	2.2 Care and Support stat guidance	✓					
	Article 12, 23 UNCRC	✓	✓	✓			
	<p><i>Co-production is way of working in which moves away from the view of people being recipients of services, requiring significant shift in organisational culture.</i></p> <p><i>Deaf children are mostly into families where they are the only child and often attend mainstream schools with few deaf peers. Deaf children have significant challenges accessing everyday information in hearing worlds and this can result in less opportunities to communicate and activity express their views. This can lead to reduced world knowledge increasing their vulnerabilities to abuse. Active ways to promote participation and empowerment are critically important.</i></p>						

Appendix 1: Self-audit template

Safeguarding partners are invited to use the following self-audit template tool to consider the key outcomes in any or all of the areas shown in the summary table of key outcomes for deaf children and young people. The level of evidence required will be dependent on the relevant duties outlined above. Partners can use a variety of sources of evidence to consider how they the extent to which they are meeting their duties within legislation and/achieving best practice.

Sources of evidence (not exhaustive)

- Multi-agency meetings, e.g. Children's Hearing Services Working Groups (CHSWGSSs)
- Community meetings, formal consultations, surveys
- Sensory pathways/sensory protocols
- Partner policies and procedures
- Information leaflets
- Links to Social Work for Deaf Children group
- Links to local schools
- Online information
- Feedback from individuals
- Case audits
- Service level agreements
- Serious safeguarding incidents
- Ofsted/CQC local area SEND inspections
- National and international research studies
